

Rahat Tashin  
TCS/Simplilearn Fashionista (Final Project)

### Online-Ecommerce-Store

This online stores pages for both users and admin, where admin would be able to add, delete, update products as well keep the track of users and their accounts. Where else user would be able to buy clothing products of their choice add and delete from the cart.

**Technologies used: VS Code, Nodejs, Angular, JavaScript, HTML, CSS, Bootstrap, MongoDB, and GitHub**

**GitHub Link:** [https://github.com/rahatTCS/Online\\_Ecommerce\\_Store.git](https://github.com/rahatTCS/Online_Ecommerce_Store.git)

#### **Application Running Process:**

- Go to the GitHub link provided above and clone the repo.
- Then, open the project folder on VS Code.
- Next, open a terminal from the VS Code and type “npm install”.
- Next, type “npm start” on terminal. This will start the project execution.
- Open the browser, and type <http://localhost:4200/>
- Once project starts make sure to turn mongo on to check the database on backend.
